HP 5361B

### HP 5361B Pulse/CW Microwave Counter

The HP 5361B offers both high-precision pulse and CW performance. With built-in frequency modulation profiling, the HP 5361B characterizes radar, EW, and communications systems or components. This counter lowers your equipment costs by eliminating the need for a separate CW counter, pulse generator, and computer.

Key features include:

**Pulse measurements:** Frequency, PRF, PRI, pulse width, and off-time.  
**Frequency profiling:** Characterize frequency transients, modulation (such as chirp), and linearity using the PROFILE function. No external gate is required.

**Fast track:** Measure a signal that is sweeping at up to 800 MHz/s.

**Low FM rate:** Measure signals that vary slowly in frequency.

**Simplified operation:** To offload the operator, built-in automatic functions include calibration, signal assessment (pulsed or CW), signal acquisition, gate width calculation and setting, gate positioning, PRF mode, tracking of sweeping signals, pulse averaging for desired resolution and measurement display.

**Scope-View:** Set up externally gated measurements by viewing the down-converted pulse with a dc offset.

The HP 5361B is a cost-effective choice for manufacturing and service. High-speed throughput saves operator time and lowers cost. Periodic maintenance is limited to time-base calibration.

For radars, VCOs, and DTOs, the HP 5361B makes frequency, timing, and profiling measurements at the touch of a button. The counter makes more complex measurements for the carrier frequency of agile signals, staggered PRIs, or the frequency transients in a pulsed or CW signal. With one instrument you can characterize radar pulses or test a Stable Local Oscillator (STALO). Functions for measuring step response, post-tuning drift, and settling time facilitate accurate and easy testing of VCOs and DTOs.
