

TEYUN Q-12

In-Depth

Review

Why Did I Buy the Teyun Q-12

- I wanted a USB audio interface to use with OBS Studio that has the following features
 - A 3.5mm TS condenser mic input that will work with my headset microphones
 - This seems to be a very rare feature
 - This is different than phantom power for high-end condenser mics
 - A balanced XLR that input will work with my Electro Voice 664A super-cardioid dynamic microphone
 - A headphone monitor without any latency
 - Physical volume controls → knobs I can turn or sliders I can push
 - Affordable
- Features I don't need (now)
 - 48V phantom power
 - Line level inputs
 - Guitar inputs
 - Line level outputs
 - Idiotic sound effects
 - reverb

Combination true differential XLR & 1/4" TS phone plug inputs

1/4" TS mono phone plug outputs

1/8" (3.5mm) TS phone plug mono condenser microphone input. RØDE and Sennheiser compatible. 3.16V 5.3K

1/8" (3.5mm) TRS stereo phone plug headphone monitor output

The LEVEL 2 control only controls the INPUT 2 level, it has no effect on other inputs

The LEVEL 1 control is shared by both INPUT 1 and the MIC CONDENSER input

MAIN OUTPUT volume only. It has no effect on the levels going to the ADC (*analog to digital converter*)

Headphone volume only

DOWN to enable the flaccid 35V (not 48V) phantom power on both XLR inputs.
Rs are 8.2KΩ, not the standard 6.8KΩ

DOWN to "Loop Back" or send the computer digital audio output with the audio inputs to the digital output stream.

UP sends only the audio inputs in the digital output stream.

Adds 6dB (not 10dB) of gain to **INPUT 2**

The computer digital audio output is always in the **MAIN** outputs and headphones.

There is no knob to control the computer output level in the mix. You must use the output level on the computer.

UP for mono
DOWN for stereo
1 left - **2** right

These PEAK and SIGnal lights are useless. The Analog to Digital Converter (ADC) clips many dB before either of these LEDs illuminate

When the MAIN volume is turned fully clockwise these LEDs are work for the levels going into the ADC

The level indicator LEDs for the main output are useful for monitoring the digital output if the main volume control is rotated fully clockwise

Differential XLR Input Levels:

Maximum Input without ADC clipping
-34 dBV
20 mVrms
56.6 mVpp

RED LEDs
-37.1 dBV
14 mVrms
39.6 mVpp

Green LEDs
-46 dBV
5 mVrms
14.1 mVpp

Combination true differential XLR & 1/4" TS phone plug inputs

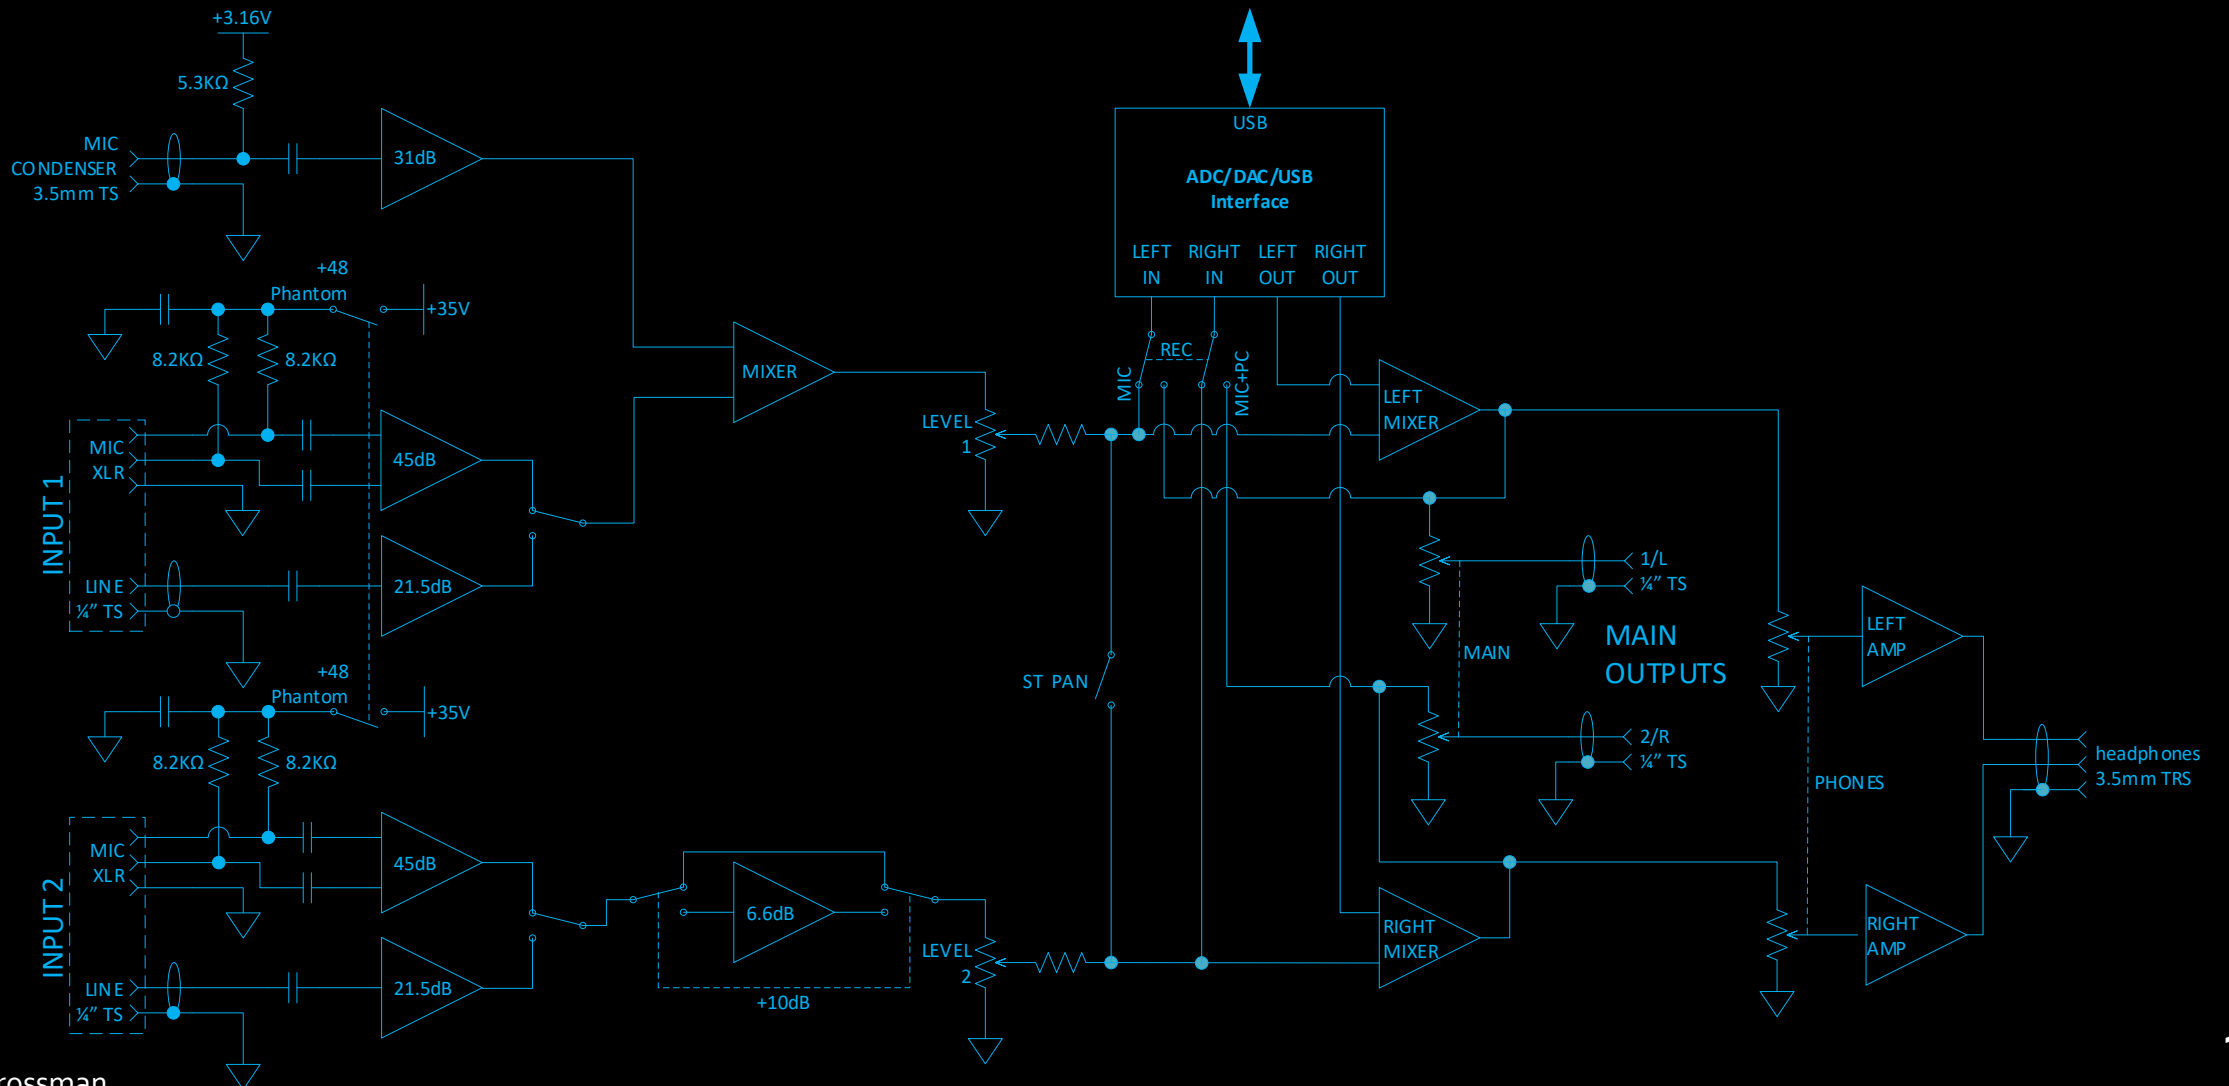

1/4" TS mono phone plug outputs

1/8" (3.5mm) TS phone plug mono condenser microphone input. RØDE and Sennheiser compatible. 3.16V 5.3K

1/8" (3.5mm) TRS stereo phone plug headphone monitor output

Specifications on the Teyun Q-12 Box

PRODUCT PARAMETER:

MIC INPUT 1-2(balanced)

~~Frequency response: -1/-1dB, 20Hz – 20kHz~~

20 Hz to 13 KHz (3dB)

Dynamic Range: 82 dB, A weighting

0.1% to 0.18%

~~THD+N 0.03%, 1kHz~~

CMRR > 36dB

~~Maximum input level: +6dBu Input resistance 4kΩ~~

-34dBV (20mVrms)

+45dB or +51.6dB

~~Gain range: +3dB – +60dB~~

HI-Z INPUT 2 (Unbalanced)

~~Maximum input level: +3.0dBV~~

-10.5dBV (300mVrms)

Input resistance: 1 MΩ

+21.5dB or +28.16dB

~~Gain range: 0dB – +40dB~~

LINE INPUT 1/2(balance)

Maximum input level: +10dBu not tested

Input resistance: 18.5kΩ

Gain range: -10dB – +40dB not tested

~~MAIN OUTPUT(Impedance balance)~~

~~Frequency response: -1/-1dB, 20Hz–20kHz~~

~~Dynamic Range: 82 dB, A weighting~~

~~THD+N 0.02%, 1kHz,~~

~~Maximum input level: +6dBu~~

~~Input resistance 100kΩ~~

PHONES

subjectively sounds very good, but not tested

Maximum input level: 15mW +15mW, 40Ω

USB

Technical specifications: full speed USB2.0,

16-bit, 48kHz Plug & play compatible with Windows 10 (USBAudio2.0) & Mint Linux

XLR INPUT

Polarity: 1 Grounding 2: Hot wire (+) 3: Cold wire (one)

~~Power requirements: > 5W~~ <1.8W without headphones

Teyun Q-12 Cell Service EMI Susceptibility

- I live near cell phone towers the sometimes cause EMI issues
- With no analog inputs connected I do not detect any EMI susceptibility in the unit
- With differential XLR microphones connected I do not detect any EMI susceptibility in the unit
- When I connect my Shure PGA31 condenser headset mic I detect low level cell phone EMI in the headphone audio
 - I have no way to know if the EMI is being detected (converted to audio) by the mic or the Teyun
- The “Noise Suppression” filter in OBS Studio eliminates the noise in the recording
 - I have two short examples with and with the OBS “Noise Suppression” filter

Please note that I have turned up the volume on the following recordings to make the noise more audible than in practice

The Good & Bad of the Teyun Q-12

GOOD

- Excellent physical construction
 - ☆ I will release a Teyun Q-12 teardown & measurement detail video after this one
- True differential XLR inputs
 - Good common mode rejection!
- 3.5mm TS condenser mic input
 - Hard to find feature
- Headphone monitor
 - real time / no latency
- Usable with OBS Studio
 - 16dB to 20dB of gain added with “Advanced Audio Properties”
- It has knobs I can use to adjust microphone and headphone levels
- It is plug-and-play with Windows & Linux (Mac?)
 - No special software is needed

BAD

- Flaccid 48V phantom power
 - 31-35V is too low and not stable
 - 8.2K Ω resistors are too large
 - Should be 6.8K Ω
- Needs more gain
 - 20 dB or more
- Signal Level LEDs
 - Input level LEDs have no relation to the ADC input levels
 - Since I must add gain in OBS Studio the MAIN LEDs are not useful either
- 3.5mm TS condenser mic input
 - 3.16V is on the low side, should be 5V to 10V
 - Barely perceptible “pop pop” noise from local cell service
 - The OBS “noise suppression” filter kills it
- Mostly questionable specifications
 - Unfortunately, this is true with many audio devices

Teyun Q-12 Conclusion

- 48 KHz 16 bits
 - I have been using my 16 bit motherboard inputs for years
 - I use a 48 KHz sample rate for all my videos
- It is flawed but still useful
 - I'm using it to record the sound for this video
- I only paid \$17 for it delivered to my door!
 - I put a link in the description text below the video
 - A Yamaha AG03 is more than 10x the price of the Q-12
- Hopefully, I've given you enough information to decide if the Teyun Q-12 right for you!
 - I've decided to keep mine
